

Latex CV

Input your own information in a fashion that copies the pdf example provided to you. The .tex file only includes packages and some hints, so you will need to use your new knowledge of LaTeX, as well as your Internet sleuthing skills, in order to make it match. Think of this as a puzzle to solve! You are backwards engineering the formatting of the document.

Use my clues in the comments to help guide you.

Do your best to fill in all the categories that are already present on the example CV. Don't make anything up though! If you truly have nothing to write in that category, you may write "Not applicable" or "Not yet!"

Frequently asked question: If I don't have any research papers, can I omit the Research category on this assignment? Answer: No. Please include the "Research Papers" category as a heading and then write "Not yet" on the side. (I want you to know where to put something in the future.) You may, however, skip subheadings, i.e. include "Research Papers" but don't write "Grants" or "Publications"

If you have any other areas that you would like to highlight, you may do so, as long as they complement the current style.

Frequently asked question: Can I include my computer skills? Answer: Yes, you should! This is recommended in the template.

Do not add additional packages or images. They are not needed. Figure out how to make this layout using only the already loaded packages.
